

Sales Playbook

Gazellia — AI-Powered Development Studio

Onboarding Guide • Pitch Scripts • Vertical Playbooks • Objection Handling

Confidential — Internal Use Only

Updated March 2026

Who We Are — The 60-Second Version

Gazellia is an AI-powered development studio that builds autonomous software agents for businesses. Our agents write code, run marketing campaigns, monitor infrastructure, and perform quality assurance — operating 24/7 without human intervention. We're not a typical agency. We're cheaper, faster, and our work improves itself over time.

THE KEY DIFFERENTIATOR

Most AI companies sell chatbots or wrappers around ChatGPT. We deploy **production agents that actually do the work** — picking up tickets, writing code, creating pull requests, optimizing ad campaigns — right now, today, for real clients. This isn't a demo. It's running.

CREDIBILITY PROOF POINTS

Startup Acquired by Bullhorn

Our founder built the core web scraping and data enrichment engine for Fyre, a recruiting technology startup. Bullhorn — a global enterprise serving thousands of staffing firms — acquired the company. That technology is still powering their platform today.

Cloudgate — Co-Founded

Built a full-stack recruiting platform from scratch. Candidate management, job matching, client portals, analytics. Serving recruiting agencies across the country. Still in production.

Fortune 100 Partnerships

Active development partnerships with companies including Kroger, CDW, and Paro. Enterprise-grade systems built to handle real scale — not weekend projects.

13+ Years, UCF CS 4.0 GPA

Computer Science degree from the University of Central Florida with a perfect GPA. Early AR development for Google Glass. Over a decade of shipping production software across recruiting, retail, fintech, and marketing.

When a prospect asks "Have you done this before?" — the answer is always yes, and there's a specific story to back it up.

The Pitch Framework

Every pitch follows the same structure regardless of vertical. Adapt the examples and proof points to the prospect's industry.

1 Open with the Pain

"You're paying \$15-30K/month for developers — or struggling to hire. Either way, you're not moving as fast as you need to. What if your backlog worked on itself overnight?"

2 Introduce the Agent Concept

"We deploy AI agents that do real work — not chatbots, not copilots. Agents that pick up your tickets, write code, create pull requests, and learn from every task. They run 24/7 and get smarter over time."

3 Prove It's Real

"We have agents in production right now doing this for clients. One of our founders built the data engine that got acquired by Bullhorn — it powers thousands of recruiting firms today. This isn't theoretical."

4 Show the Economics

"A full-time developer costs \$8-15K/month. An agency charges \$15-30K. Our AI dev agent is \$3,500-7,500/month — and it works nights, weekends, and holidays. No PTO, no turnover, no ramp-up time."

5 Remove the Risk

"Month-to-month. No long-term contract. No setup fee. All code is yours from day one. If it doesn't work, you cancel. But it will work — because it's already working for other clients right now."

CLOSING LINE

"Let's do a quick discovery call this week. I'll map out exactly how an agent would fit your workflow and give you a custom proposal. 30 minutes — no commitment."

Recruiting & Staffing

HIGH PRIORITY

WHY THIS VERTICAL IS OUR STRONGEST

Our founder literally built recruiting technology that got acquired by Bullhorn. We co-built Cloudgate, a full recruiting platform. We know ATS systems, candidate pipelines, compliance requirements, and the pain points of staffing firms inside and out. **No competitor can match this credibility.**

THEIR PAIN POINTS

- Spending thousands on job board scraping tools that break constantly
- Recruiters drowning in manual data entry — copying candidate info between systems
- ATS/CRM customizations are expensive and slow through vendors like Bullhorn
- Can't afford a full dev team but need custom integrations and automations
- Marketing for open roles is manual and inefficient

WHAT WE SELL THEM

Data Enrichment Agent

Automatically enrich candidate profiles with data from LinkedIn, job boards, and public sources. Same concept we built for Bullhorn — now available as a managed service.

ATS Integration Agent

Custom integrations between their ATS (Bullhorn, JobDiva, etc.) and other tools. Automate candidate flow, sync data, eliminate double-entry.

Recruiting Marketing Agent

AI-powered job ad creation, automated posting across platforms, candidate pipeline analytics,

Custom Platform Development

When off-the-shelf tools don't cut it. We built Cloudgate from scratch — we can build custom

and A/B testing of job descriptions.

recruiting tools faster and cheaper than anyone.

OPENING SCRIPT — RECRUITING

"I'm reaching out because we specialize in AI automation for recruiting firms. Our founder actually built the data enrichment engine that Bullhorn acquired — so we know the staffing tech space inside out. I wanted to see if you're dealing with any of the manual data headaches that most firms struggle with."

E-Commerce & Retail

THEIR PAIN POINTS

- WordPress/Shopify sites that break with every plugin update
- Ad spend growing but ROAS declining — no time to optimize creatives
- Seasonal traffic spikes crash their site or spike their AWS bill
- SEO and content updates are a full-time job they can't staff
- Customer data scattered across 10 different tools

WHAT WE SELL THEM

WordPress Maintenance Agent

Autonomous plugin updates, security patches, content changes, and performance optimization. We already run this for production e-commerce sites — proven and stable.

AI Marketing Agent

Monitors their Meta/Google ad campaigns, generates creative variations, optimizes budget allocation, and updates landing pages — all with approval workflows.

Infrastructure Monitoring

Prevent site crashes before they happen. Cost anomaly detection, auto-scaling configuration, and 24/7 health monitoring.

Custom E-Commerce Features

AI-powered product recommendations, intelligent search, inventory forecasting, or custom checkout flows — built on their existing platform.

OPENING SCRIPT — E-COMMERCE

"I noticed your site runs on WordPress — we specialize in AI-powered e-commerce automation. We have an agent that handles all your site maintenance autonomously — plugin updates, security, content changes — plus a

marketing agent that optimizes your ad campaigns 24/7. Most of our e-commerce clients save 60-70% compared to their current agency. Would it be worth a 20-minute call to see how this fits?"

PROOF POINT

We actively run a WordPress maintenance agent on a production e-commerce site right now. It handles tickets from intake to deployment — fully autonomous. We've also partnered with Kroger on enterprise retail systems.

SaaS & Startups

THEIR PAIN POINTS

- Burning runway on full-time developers they may not need long-term
- Backlog growing faster than the team can ship
- QA is manual, flaky, and slowing down releases
- AWS bill is growing and nobody's optimizing it
- Need to move fast but can't sacrifice code quality

WHAT WE SELL THEM

AI Dev Agent

BEST FIT

Their highest-ROI play. An AI developer that works through their backlog 24/7 — picking up Jira/Linear tickets, writing code, creating PRs, responding to review. Like adding a mid-level dev for a fraction of the cost.

QA & Testing Agent

Generate test cases from specs, run regression suites, catch flaky tests, and validate deploys before production. Integrates with their CI/CD pipeline.

Infrastructure Agent

Monitor their AWS environment, catch cost anomalies early, auto-remediate common issues, and deliver monthly optimization reports.

MVP / Feature Development

Need to ship a new feature or build an MVP fast? Our hourly rate (\$100-150/hr) is 40-60% below typical agencies, and we can pair with AI agents to accelerate delivery.

"Hey — I see you're building [product name]. We help SaaS companies ship faster by deploying AI dev agents that work through your backlog autonomously. Imagine waking up to pull requests that were written overnight on your Jira tickets. We're about 50-70% cheaper than hiring or an agency, and there's no contract. Worth a quick chat?"

Agencies & Consultancies

THEIR PAIN POINTS

- Client projects piling up but can't hire fast enough to scale
- Margins squeezed by rising developer salaries
- Maintenance contracts eating into new project bandwidth
- Clients asking about AI but the agency doesn't have AI expertise
- Offshore contractors are unreliable and require heavy management

WHAT WE SELL THEM

White-Label AI Agents

Agencies can resell our agents under their own brand. They charge their client \$10K/mo, pay us \$4K/mo, and pocket \$6K in margin — with zero additional headcount. We handle all the infrastructure.

Overflow Development

When they're at capacity, we take on projects at \$100-150/hr — below what they'd pay most subcontractors. Our AI-accelerated delivery means faster turnaround.

Managed Maintenance

We take their maintenance contracts off their plate. AI agents handle the routine work (updates, bug fixes, monitoring) so the agency can focus on new revenue.

AI Capability Add-On

Help them offer AI services to their clients without building AI expertise in-house. We build it, they sell it, everyone wins.

THE AGENCY PLAY — THIS IS BIG

The white-label opportunity is the highest-leverage sale. One agency partner with 5 clients using our agents = \$20K/mo recurring for us with minimal marginal cost. **Target agencies with 10-50 employees who are feeling the AI pressure but don't have the in-house talent to deliver it.**

Objection Handling Cheat Sheet

Every objection is a buying signal. Here's how to handle the most common ones.

"AI can't write production-quality code"

It already is — for our current clients, right now. Our agents don't just generate code blindly. They understand the codebase, follow existing patterns, create proper pull requests, and respond to code review feedback. They also learn from every task, so they get better over time. We built the engine that Bullhorn acquired — we know how to ship production software.

"We tried Copilot / ChatGPT and it wasn't good enough"

Copilot is an autocomplete tool. ChatGPT is a chatbot. Our agents are autonomous workers. The difference is like comparing a spell-checker to a full-time writer. Our agents pick up tickets, clone repos, write code, create PRs, and iterate on feedback — without anyone sitting in front of a screen prompting them.

"What about security? We can't have AI touching our codebase"

All code goes through your normal PR review process — nothing gets merged without human approval. The agent runs on our managed infrastructure (or yours if you prefer). We can sign an NDA and work within your security requirements. Our agents are already trusted with production codebases for enterprise clients.

"This sounds too cheap — what's the catch?"

No catch. We can charge less because AI dramatically reduces our cost to deliver. Traditional agencies have 10 developers billing \$200/hr each. We have AI agents doing the repetitive work and senior engineers handling the complex decisions. Our margins are healthy — we're just sharing the efficiency gains with you instead of keeping them all.

"We'd rather hire a full-time developer"

A mid-level developer costs \$8-15K/month including benefits, takes 2-3 months to ramp up, needs management, takes PTO, and might leave in a year. Our agent is \$3,500-7,500/month, starts producing on day one, works 24/7, never quits, and gets smarter over time. You also cancel month-to-month. Try getting that flexibility with a full-time hire.

"Can we do a trial / pilot first?"

Absolutely. That's actually how we prefer to start. Pick your 3-5 highest-priority tickets and we'll have our agent work through them. You'll see real PRs in your repo within the first week. No long-term commitment — if it doesn't deliver, you cancel.

"We already have an agency"

We're not asking you to fire them. Start with one agent alongside your current team. If our dev agent costs \$4K/month and handles the work of a \$12K/month developer on your agency's bill — you'll know pretty quickly which is the better deal. We often work alongside existing teams.

Sales Process

THE PIPELINE

1

Outreach / Inbound

Lead comes in via gazellia.com contact form, cold outreach (LinkedIn, email), or referral. Qualify: Do they have a dev team or agency? What's their monthly spend? What tools do they use (Monday.com, Jira, GitHub)?

2

Discovery Call (30 min)

Understand their workflow, pain points, and current spend. Map out where an agent would fit. Use the vertical playbook for their industry. Don't pitch pricing yet — focus on the problem.

3

Custom Proposal

Send the pricing PDF (Services & Pricing doc) with a custom cover note tailored to their specific use case. Highlight the cost comparison vs. their current approach. Include a recommended agent package.

4

Pilot / Close

Offer a pilot: 3-5 tickets for the agent to work through in the first week. No contract for the pilot — just month-to-month. Once they see real PRs landing in their repo, the close happens naturally.

5

Onboarding (Week 1)

Get access to their repo (GitHub/GitLab), project board (Monday.com/Jira), and Slack. Configure the agent. First tickets processed within 24-48 hours. Weekly check-in call for the first month.

QUALIFICATION CHECKLIST

Green Flags

- Already using Monday.com, Jira, or Linear
- Spending \$5K+/mo on developers or agency
- Growing backlog they can't keep up with
- Asking about AI — curious but unsure where to start

Red Flags

- Budget under \$2K/month
- No existing codebase (need strategy, not agents)
- Want to "try AI" with no clear use case
- Decision requires 6+ stakeholders / committee

Quick Reference Cheat Sheet

Print this page and keep it at your desk.

PRICING AT A GLANCE

AI Dev Agent

\$3,500–7,500/mo

vs. \$8-15K hire / \$15-30K agency

Marketing Agent

\$2,000–5,000/mo

vs. \$5-15K agency

Custom Dev

\$100–150/hr

vs. \$175-300/hr agency

ELEVATOR PITCHES BY VERTICAL

Recruiting

"We built the tech Bullhorn acquired. Now we build AI agents that automate data enrichment, ATS integrations, and recruiting marketing — for a fraction of what you'd pay a dev shop."

E-Commerce

"We run AI agents that maintain your site, optimize your ads, and monitor your infrastructure — 24/7, fully autonomous. Most e-commerce clients save 60-70% vs. their current agency."

SaaS / Startups

"Imagine waking up to pull requests on your Jira tickets that were written overnight. Our AI dev agent works through your backlog 24/7 for less than half the cost of a hire."

Agencies

"White-label our AI agents under your brand. You charge your clients \$10K, pay us \$4K, keep \$6K — with zero additional headcount. We handle all the infrastructure."

KEY DIFFERENTIATORS TO MEMORIZE

- **Production agents running right now** — not demos
- **Month-to-month, cancel anytime** — zero risk
- **Startup acquired by Bullhorn** — proven track record
- **Agents get smarter over time** — improving ROI
- **50-70% cheaper** than agencies or full-time hires
- **All code is the client's IP** — full transparency
